

PLANNING AND DESIGNING FOR HOLISTIC WELL-BEING

Developments that exemplify how residents' physical, social and mental well-being are met holistically.

Yew Tee Integrated Development

Yew Tee Integrated Development comprises housing for the elderly and a mix of healthcare and community facilities including a hawker centre, Community Club, polyclinic, kidney dialysis centre, commercial shops and a community plaza, designed to support healthy living in a vibrant and inclusive environment.

Lush landscaping and green spaces curated for enjoyment, exercise and to support mental well-being.

Visually and spatially porous, the development is designed with a range of community spaces for social activities.

The interface of 'Living Gardens' in the heart of the development creates a unique shared realm that supports physical, social and mental well-being.

The community plaza is designed for a variety of community functions, reinforcing a sense of place. (Wall art is for illustration purpose only. Photo credit: @Hendrikodito)

The inclusive spatial design of the outdoor landscape deck promotes social interactions and active lifestyles amongst the 3-Generation communities.

Seamless integration and visual porosity across the different programmatic spaces provide a sense of connection and support social well-being.

Harmony Village @ Bukit Batok

Harmony Village @ Bukit Batok is the first pilot Community Care Apartments which integrates senior-friendly housing with care services. It is envisaged to foster a strong community spirit, with a myriad of shared spaces designed to encourage social interaction and active living. Within the block, residents can mingle and build social networks at the furnished communal spaces on each floor.

Residents will have access to an activity centre, roof garden, community garden, and precinct facilities to keep a healthy and active lifestyle.

The hawker centre in the development will provide a variety of food options to residents and the public.

The roof garden is equipped with precinct facilities such as strolling paths, children's playground and fitness stations.

The community garden is where residents can grow vegetables, herbs, and plants.

Educational signage located in landscape areas provide learning opportunities for all (e.g. at ABC waters features, playgrounds, and community gardens).
